# Pro-PLUS telecare solution for COVID-19

Pro-PLUS telemedicine solution enables supervising citizens in quarantine and monitoring patients infected with COVID-19 staying at home.

Pro-PLUS solution offers:

- continuous monitoring of SpO_2, heart rate and body temperature of the patient

- built-in internal trigger thresholds for all measured parameters (notification can be send by SMS or e-mail)

- geolocation - control of citizen localization and providing the information to the police when citizen break the quarantine conditions

CardioScp WEB Telemedical Platform

Benefits of this solution:

- better use of the hospitals bed base by sending the patients with a mild course of disease for home treatment

- ensuring the safety of people staying in homes under home quarantine

- compliance of the citizen with quarantine conditions

- significantly reducing the number of people who come to hospitals

- reducing the necessity of patient direct contact with medical staff

- allowing doctors to provide remote, daily care over patients with the possibility of a quick reaction to disturbing irregularities
