

Pro-PLUS remote cardiac care

Pro-PLUS cardiology e-office allows patient care under the state of an epidemiological emergency. Thanks to the Pro-PLUS solutions in which patients are equipped, it is possible to significantly reduce visits to specialist physicians or replace them completely ensuring a high level of safety and continuation of therapy.

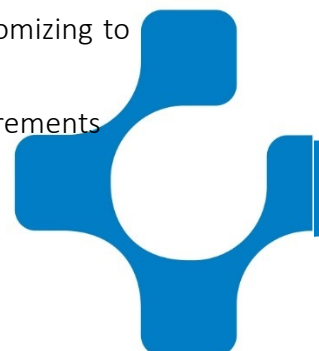

cardiology e-office allows to:

- continuing therapy of cardiological patients, replacing of periodic visits to a cardiologist with remote cardiological care
- remote Holter monitoring for patients - periodic monitoring of patients' cardiological condition (monitoring of therapy results, monitoring of pharmacotherapy results, monitoring of exacerbation of the patient's condition)
- remote diagnostics of patients, who would like to receive the cardiologist's consultation for the first time

cardiology e-office provides:

- remote cardiac telemonitoring with implemented diagnostics process customizing to the patient using EHO-MINI Event Holter device
- option of additional medical measurements including blood pressure measurements
- Video-consultations conducted using the Pro-PLUS Telemedical Platform

- constant contact of the doctor with the patient using teleECG device - VOICE communication function

BENEFITS:

- allows reducing the necessity of patient direct contact with medical staff
- high-quality, proven medical solution used for years by doctors all over Poland
- allows doctors to continue care over patients using telemedicine solutions
- allows quick reaction in the event of disturbing symptoms
- flexibility of the solution - different ECG device operating modes and configurable thresholds for individual measurements ensure safe and efficient patient monitoring
- continuity and high-quality medical services for patients under the state of epidemiological emergency
